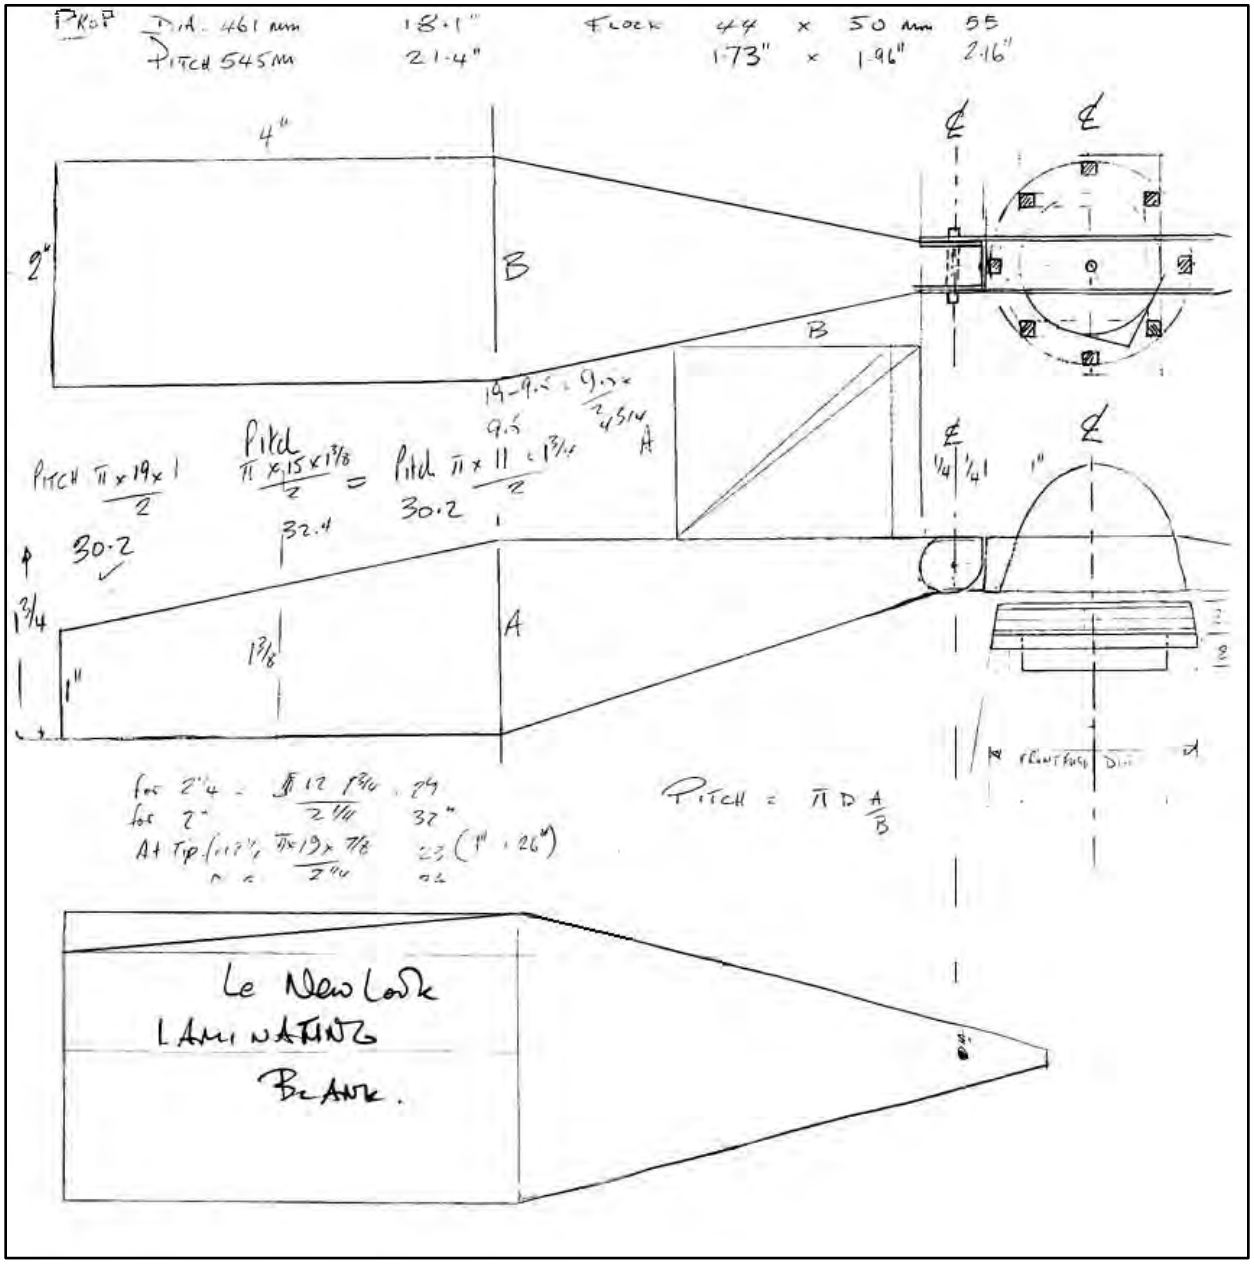
Jacques Morisset's "New Look I" – Propeller Blank – To Carve or Laminate?



These are the working drawings of the propeller blank I devised using various information seen on the full size plan, three-views and MRA translations. Originally my intention was to carve the blade and mount it in a hinged hub but eventually the blade was laminated from several layers of 1/32" balsa using the blank illustrated. Its dimensions are slightly different to the carved version.
